COMMENTS				
<p>The project ran without any problems, good. Almost all the models need to be rewritten, they are all missing fields and I can see you don't use ref that much and instead repeat the same fields over and over again which is not good. You guys put the MongoDB url inlined in the index.js which is just bad, I can understand that using MongoDB wasn't required at sprint 1 so you won't lose any marks, I am just pointing out that there are problems that you need to fix in the upcoming sprints ... Now, routes, you commented out the validations, why ? you should validate every single input from the user, remember ? Also the company route doesn't contain the get route of a single company and doesn't contain the update route of a single company .. You didn't implement lots of routes ... You need to organize you code as well, it is a mess down there .. I can see you guys tried hard to get things working and you partially succeeded so good job, you only need to start following the coding guidelines to organize your project.</p>
